

RUMISUR HC

PA 736

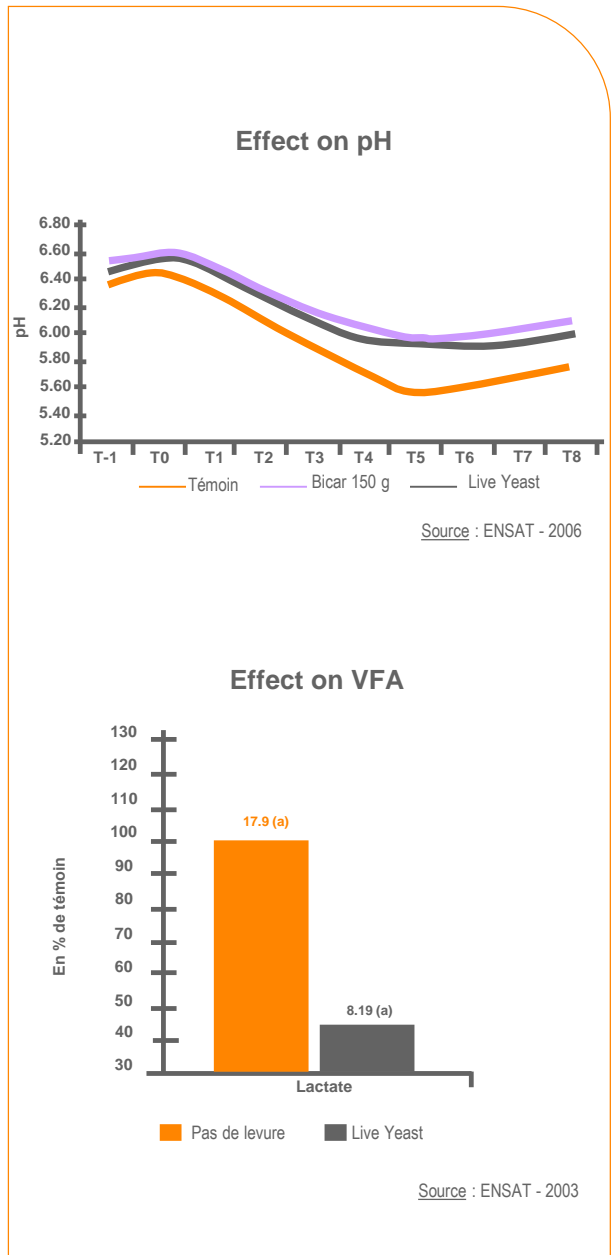

To reduce risk of acidosis

RUMISUR is designed to maintain the pH in the rumen and reduce the risk of acidosis.

- Magnesia : for a synergic effect with bicarbonate soda and stimulate the cellulolytic bacteria.
- Live yeast to stabilise the pH in the rumen (the lactic acid is reduced) and optimise the use of the forages in the diet.
- Clay : to bind the acids ions and protect the rumen papilla

The mains benefits of using **RUMISUR** are :

- To **reduce** the metabolic disorder.
- To **stabilise** rumen activity
- To **reduce** risk of acidosis
- To optimise performances.

INSTRUCTIONS FOR USE : PA 713

- 5 to 10 g / sheep / day
- 50 to 100 g /cow /day
